About the American Beliefs Study Reports

The American Beliefs Study provides a projection of likely religious beliefs, preferences, and practices for a defined study area. This report is based on the American Beliefs Study national survey, which MissionInsite conducts every five (5) years. While general religious data is available through various organizations, only MissionInsite can provide current local geography projections. This report is based upon the 2021 American Beliefs Study Survey.

The 2021 American Beliefs Study Survey series contains two reports. **ReligiousInsite** provides insights into community beliefs and religious preferences. **MinistryInsite** focuses on practical applications of the 2021 survey. It includes life concerns, reasons for non-participation (or considered nonparticipation) in a religious congregation or community, and a list of preferred ministries or programs. These are based on the specific study area. Customized priority address the study area's concerns, program and ministry preferences and more.

The **ReligiousInsite Priorities** Report and **MinistryInsite Priorities** Report capture the priorities of some survey questions based upon strengths of beliefs plus the direction of the beliefs, whether towards agreement or disagreement. These two reports correspond to the full reports.

Contents of the ReligiousInsite Report

The **ReligiousInsite** Report has six sections that provide multiple views about a single topic.

How to Read the Different Report Types

Four windows provide insight into the respondent's answers.

Window #1:	Reveals the detailed responses across all options.
Window #2:	Compares the study area responses to national average responses. For more details, see the last page.
Window #3:	Compares data between this survey and previous surveys to reveal trends.
Window #4:	Provides prioritized lists of the topic. This window is only available on certain topics and after applying analytics.

Hint: The Comparative Index shows how your study area compares to the national average on each statement. If the Disagree numbers are red, then your study area is below the national average of those who disagree regarding that statement. If the Agree numbers are red, then your study area is below the national average of those agreed with that statement. If the Comparative Index has no color then you are very close to the national average. The higher or lower the number on any particular statement, the greater is the study area's departure from the national average.

Direction and Strength of Beliefs About God Compared to National Average

Hint: This chart compares the study area to the national average and reveals the belief's strength. The longer the bars, the greater the agreement or disagreement.

Hint: This report compares answers on the 2017 and 2021 American Beliefs Study surveys and shows changing trends on these social and moral belief statements, if any. The chart displays the distance between the 2017 and 2021 statements. The longer the bar, either positive or negative, the greater the shift in agreement.

Trends in Social and Moral Beliefs Between 2017 & 2021

Hint: What does this graph show? It compares the change in agreement between the 2017 American Beliefs Study Survey and the 2021 American Beliefs Study Survey for this study area. (It is not a comparison to the national profile.) Look for significant swings in either direction.

Hint: Respondents were asked to indicate their religious preference, if any, for both 10 years ago and now. The report provides both data points plus a calculation of the change between the two points. If the point change column is red, fewer respondents preferred a particular tradition today than 10 years ago. If the point change column is black, more respondents embrace a religious preference more today than 10 years ago. This shows the trends below. This report also compares the study area to the national average responses. The Comparative Indexes reveal whether the study area averages are higher or lower than the national average.

Direction & Strength of Religious Preferences Compared to National Average

Hint: Bars on the right indicate an estimated increase in affiliation. Bars on the left indicate an estimated decline in affiliation.

Note: A Covenant Order of Evangelical Presbyterians (ECO) is a new denomination that emerged since the 2012 survey. Any increase is due to the fact that they did not exist before.

Faith and Religious Involvement

Faith is a dynamic factor in many people’s lives. It grows and declines, and the level of active involvement changes as well. The Faith and Religious Involvement variables use several vantage points to provide an understanding of your study area’s faith and involvement.

Activity in a Religious Congregation or Community			
Study Area Compared to National Average			
	Study Area	US Average	Comparative Index
Involvement			
Projected percentage involved	33.1%	35.4%	93
Projected percentage NOT involved	66.9%	64.6%	104
Estimated change of those involved over prior 10 years (point change)	-8.0	-8.9	

Hint: This table presents the percentage of the population in the study area likely to either be involved or not be involved in a religious congregation or community. It also compares these two data points to the national average.

Also, consider the Estimated (point) Change over 10 years. This looks at how respondents answered the question about involvement both currently and 10 years ago. If this number is negative, it means it is likely that the level of involvement is declining in the study area. You can compare this to national changes.

	Study Area	US Average	Comparative Index
Directional Change in Involvement			
Percent likely to have become active	2.7%	3.8%	71
Percent likely to have ceased to be active	10.7%	12.7%	84
Percent likely to have made no change	86.6%	83.5%	104
Net Change in direction of activity	-8.0	-8.9	

Hint: This table reflects how respondents answered a question about activity in a religious congregation or community. If they were involved 10 years ago, but not today, this is reflected in the "Percently likely to have ceased to be active" column. If they were not active 10 years ago, but are now, this is reflected in the "Percent likely to have become active" column. The net change in direction of activity displays the direction the religious activity is moving. If the number is red, more individuals have stopped being active than have become active. You can also compare the study area to the national average.

Supporting Information

Interpreting the Report

The American Beliefs Study reports help you interpret data at a glance.

Comparative Indexes: All variables have a column called Comparative Index, which compares your study area with a larger area. For this report, all comparisons are with the national averages for the data item.

- Indexes of 100 mean the study area variable is the same as its base area.
- Indexes greater than 100 mean the study area variable is above the base area. The higher the number, the greater it is above the base.
- Indexes less than 100 mean the study area variable is below the base area. The lower the number, the greater it is below the base.

Color Coding: The Comparative Indexes columns are color coded so you can easily spot changes and the direction of change.
